Sales & Revenue Intelligence Dashboard

Power BI portfolio project • Nami Mehta • Synthetic data only

Business objective

Create an executive view of sales performance that separates realized revenue from open pipeline and helps compare performance by month, region, product category, sales channel, and salesperson.

Dataset

1,800 synthetic order records covering January 2024 to December 2025, plus date, customer, product, salesperson, and region dimensions. No real customer or employer data is used.

Core KPIs

Metric	Definition
Realized Revenue	Net sales from Won orders
Gross Profit	Profit from Won orders
Win Rate	Won orders ÷ all orders
Open Pipeline	Net sales value for Open orders
Average Won Order Value	Realized revenue ÷ Won orders

Planned report pages

1. Executive Overview: KPI cards, monthly revenue trend, regional performance, category/channel matrix and slicers.
2. Sales Performance: salesperson ranking, channel win rate, order status and open pipeline.

3. Product & Profitability: category/product performance, profit margin, discount vs. profit and product mix.

Deliverables included

Clean synthetic CSV tables, DAX measures, Power BI theme JSON, SQL practice queries, dashboard layout preview, and a step-by-step build guide. The preview is a design reference, not a completed .pbix report.

Important

This is a learning project built from synthetic data. The dashboard should be built and validated in Power BI Desktop before the project is described as a completed interactive dashboard on a resume.
